1   Kallisto Commands

The Kallisto Commands were written in an automated fashion using a Python script. The shell script can be found at the following url: `https://github.com/WormLabCaltech/Angeles_Leighton_2016/blob/master/input/kallisto_commands.sh`.

The resulting TPM files were analysed using Sleuth via a customized R script, `aging_rna_seq_analysis.R`. This script can be found here: `https://github.com/WormLabCaltech/Angeles_Leighton_2016/blob/master/rdocs/aging_rna_seq_analysis.R`.

The results from Sleuth were analyzed using Python in a Jupyter notebook. All Python code can be found in the `src` directory of our Github repository.
